

## **About Sleeve Right**

Sleeve Right is a new technology for the beverage industry. This product provides many benefits that have eluded other similar products.

Sleeve Right protects the hand from the cold, absorbs the condensate moisture, and provides a warm and comfortable feel to the hand.

The Sleeve Right sleeve actually grips the cup and will not fall off. The exterior of Sleeve Right provides a positive grip to the hand while providing thermal protection.

## **Cardboard Sleeves**

Cardboard Cup Sleeves are an old technology. It is essentially a stiff piece of cardboard cut to the shape of a cup. The cardboard sleeve is usually ill fitting and slides off the exterior of the cup.

The feel of the cardboard sleeve is hard, stiff and has no grip. The cardboard sleeve exterior sticks to or falls off in most cup holders.

## **The Difference**

Sleeve Right sleeves protect the hand from intense heat on hot cups and absorb condensation from cold cups, keeping a firm grip on the cup in the process.

Sleeve Right is the first and only cup sleeve that does not use any paper in its manufacture and is eco friendly by saving trees.

## **Features:**

- Reusable
- Recyclable
- Protects hands from cups heat and cold
- Presents cold drinks perfectly, no wet hands
- No cutting trees
- Environmentally friendly
- Absorbs condensation from cold cups
